

# Terrain dB12 selected for prestigious hotel refurbishment project

The 92 bedroom Grade II listed Great Northern Hotel saw Terrain dB12 specified throughout.

Terrain  
dB12

Polypipe worked with contractor Dornan Engineering to provide a flexible commercial drainage system that would minimise internal noise, resulting in the specification of the easy-to-install triple layered Terrain dB12 drainage system.

Especially suited to large, multi-occupancy buildings such as hotels, Terrain dB12 was specified principally due to its acoustic rating.

With the hotel required to be in operation

prior to the commencement of London 2012, it was vital that the selected drainage solution could be supplied and installed to tight deadlines. Thanks to its ability to manufacture products off-site in its UK manufacturing facilities, Polypipe was able to supply pipe lengths and fittings to site ready for installation.

**The contractor was able to quickly install Terrain dB12 without the need for specialist equipment, showing significant commercial advantages over traditional Cast Iron systems.**

The Great Northern Hotel is adjacent to the main Kings Cross Terminus in London. International consultancy and construction company, Mace, was the main contractor

on the project which completed in December 2012.

## CASE STUDY

### Project

Great Northern Hotel - London

### Client

Dornan Engineering

### Application

Acoustically insulated soil and waste drainage

### Products

Terrain dB12
